

# Sudden Impact for Roses

Ideal for all flowering and fruiting plants ...not just roses!

# SUDDEN IMPACT!™ FOR ROSES

NEUTROG™

Endorsed By:

# Sudden Impact for Roses

After many years of research and development by Neutrog Australia, in conjunction with the Rose Society of South Australia and a number of professional rose growers, Sudden Impact for Roses was finally launched in Australia in August, 2001 and in South Africa a few years later.

The product combines the 'best of both worlds'. Its organic base provides a full range of plant nutrients in a slow release form, whilst the carefully selected water-soluble nutrients have been added to maximise the performance of each application.

The balance and ratio of nutrients, combined with the very best of raw materials, are the secret behind the success of Sudden Impact for Roses. It is manufactured in a pellet form - prior to pelleting, the organic raw materials are conditioned for up to 3 months, utilising a unique conditioning process.

Once completed the water-soluble nutrients are carefully blended into the organic base, before finally being pasteurised and pelleted.

Sudden Impact for Roses is widely used by professional commercial rose growers, whose income relies on gaining optimum results.

## Users of Sudden Impact for Roses consistently report the following;

- An increase in the number of flowers on each bush.
- An increase in the quality of individual blooms.
- Continued general plant vigour and sturdy growth.
- An improvement in the health of the plants, with increased resistance to fungal disease such as black spot, rust and powdery mildew, resulting in a significant

reduction in the need for preventative spraying by up to two thirds.

Sudden Impact for Roses is recommended and endorsed by the Western Cape Rose Society, Gold Reef Rose Society and Midlands Rose Society, as well as by several rose societies in Australia. Sudden Impact for Roses is used by several world-famous gardens in both countries.

## Applications

Apply Sudden Impact for Roses evenly to pre-soaked soil around the drip line of the plant and water again well. Keep fertiliser at least 20cm away from the base of the plant and avoid contact with foliage or flowers. Apply after sign of new season growth and thereafter every 8-10 weeks throughout the growing season. Apply Neutrog Bounce Back in winter.

## Application Rates

### Established Roses:

#### Temperate, Summer Rainfall or Highveld regions

-50g every 6 week per rose bush

#### Dry Arid regions

-50g every 6 weeks

#### Winter Rainfall Regions

-50g every 6 weeks

#### Sub-Tropical Summer Rainfall Regions

-30g every 6 weeks

#### Planting Roses (including bare-rooted):

-Apply Neutrog Bounce Back at 50g per plant.

#### General Garden

Sudden Impact for Roses can be used for general garden application (particularly on other flowering and fruiting plants) at 100g

per square metre every 8-10 weeks throughout the growing season. Apply Neutrog Bounce Back in winter.
