Your plants will just love **Seamungus**
... jam packed full of goodness!

Seamungus

Your plants will just love Seamungus. . . jam packed full of goodness. Seamungus is a soil and plant conditioner, manufactured by composting seaweed, fish, humic acid and manure.

Seamungus will retain up to 120% of its own weight in moisture – significantly increasing the soil's ability to hold onto water and nutrients.

Seamungus undergoes a unique composting process, specifically developed to stabilise the nutrients, maximise nutrient availability and to ensure that the product is free of any parasites, pathogens and weed seeds. Most importantly, the resultant product retains the microbiology necessary for a 'living' product.

Whilst Seamungus contains a wide range and good levels of plant nutrients, it is perhaps the additional unique properties of seaweed that stimulate higher yields of sustained quality.

Seaweed contains a range of essential elements – fantastic for promoting plant and root growth and development. Seaweed is also recognised for its ability to retain moisture and increase the moisture level of the plant's cell sap – this increases the plant's ability to resist frost and heat stress.

Seamungus will help increase resistance to pests and disease, stimulate healthy growth (both above and below ground) and most importantly, generally improve the wellbeing of your soil and plants.

Seamungus is an ECOCERT certified organic product. Whether growing organically or not, the rigorous ECOCERT Certification process ensures that each bag of Seamungus maintains a consistent high quality.

Applications

Seamungus is suitable for year-round application and as planting food for all plants, including indigenous, lawns and new roses. Seamungus retains up to 120% of moisture and is the perfect plant health tonic to revitalise all your plants throughout the year.

Feeding

Apply 50g per square metre every 6-8 weeks throughout the year or as required.

Planting

Ideally suited for establishing any new plants, including roses. Apply 100g per plant to base of hole and cover with 1-5cm soil.

Seamungus is also suitable for roses (as per the **Sudden Impact for Roses** rose growing program).

Roses and Flowering / Fruit-Bearing Plants
