NEUTROG
FERTILISERS
The **Experts' Choice.**

Home Gardens

The Experts' Choice Neutrog's fertilisers have been specifically developed for professional growers who rely upon optimum growth to earn a living.

Each product has been manufactured utilising a unique blend of organic materials designed to maximise the performance when applied each season.

These products are easy to apply, easy to store and are available in a range of pack sizes for the industrious or the casual gardener.

A clear, detailed analysis of each product is shown on the packs, along with helpful hints and application rates.

The products are categorised into 3 ranges;

Neutrog - premium 100% organic fertiliser, including

- ~ Rapid Raiser
- ~ Bounce Back
- ~ Blade Runner

Neutrog Signature - organically based, chemically boosted, specific application fertilisers, including

- ~ Upsurge
- ~ Sudden Impact for Roses

Soil Conditioning

- ~ Cock n Bull

Stories profiling Neutrog products used on specific plants, can be found at: www.neutrog.co.za

Sudden Impact for Roses

Is an organic based, chemically boosted fertiliser, developed and manufactured specifically for roses.

This product was developed over 3 years in conjunction with the Rose Society of South Australia, and is now endorsed by that organisation. The product is widely used by professional rose growers across the country.

This would replace Rapid Raiser in the Year Round Fertilising Program, in Rose Application.

Neutrog's Year Round Fertilising Program involves the application of a specific Neutrog fertiliser to both your lawn and garden in each of the four seasons throughout the year

Neutrog's Year Round Fertilising Program

Traditionally, and contrary to the practices of professional growers, home gardeners only applied fertilisers to their lawns and gardens in autumn and spring. No applications were made in winter or summer.

This was primarily because the nutrients in chemical fertilisers would "leach" in winter and "burn" in summer providing very little if any positive impact on the garden.

Neutrog's Year Round Fertilising Program was designed and developed by experts to provide consistent and sustained growth of your garden plants and lawns throughout the year.

Applications of organic fertilisers such as Bounce

Back and Blade Runner in winter and summer, will have a significant positive impact. These products have been specifically manufactured to suit these seasons.

In winter, this will improve soil structure and drainage, along with increasing earthworm and microbial activity. They will encourage root growth, providing a greater surface area from which to draw nutrients, giving your plants a head start for spring.

In summer, these products work in a similar fashion, encouraging root growth, increasing the plants' ability to draw moisture and nutrients from the soil. Remember that a happy, healthy, well nourished plant will look great, perform better and be less likely to be plagued by pests and disease.
